

# Get the big picture.

AND ALL THE DETAILS, TOO.

Bridging the gap between IT and facilities management, EnviroNet's ultra-reliable monitoring system always stays on the job. Keep in touch and stay in control — with EnviroNet from RLE. Contact us and learn about a free trial installation. We think you'll like what you see.

Making sense of your world

# “An ounce of prediction is worth a pound of cure.”

Avoid unplanned downtime by detecting and correcting critical motor problems – before they shut you down.

Megohm and hipot tests have their place, but Baker testers also check for turn-to-turn and phase insulation faults – the proven source of most motor insulation failures.

With Baker, you can test, troubleshoot and perform predictive maintenance on all your in-plant and replacement motors.

We build Baker testers to withstand the toughest field service, with rugged, shock-mounted cases, easy-access controls, and safety features to protect the operator and the motor.

Our new MTA 3.0 software is designed expressly for motor surge-test waveform acquisition – in the field or in the shop. Compatible with PC or Mac, MTA 3.0 works with Baker testers to store waveforms and other vital motor data (such as nameplate, DC hipot, and running information) so you can track and analyze motor test trends.

Give a call or [email us](#) to learn more about Baker products and our free training programs.

We'd like to help you see what's coming.
